

Why are MVNOs Prioritizing Digital Transformation?

MVNOs are looking at widening their services offerings portfolio in the current B2B market. They are taking a 'digital first' approach to transform their business models, explore monetization opportunities, and provide enhanced customer experience.

Why should MVNOs adopt digital transformation?

Capture lucrative markets & boost enterprise revenue

Adapt to the increasing need of offering innovative digital services

Improve customer experience by providing multiple touch points

Place value-added & hassle-free digital customer engagement channels

What can a digital MVNO do?

Market their services quickly

Leverage new technologies like 5G/IoT to explore new revenue streams quickly

Launch new brands easily to target a select group of customers

Increase ARPU & create a deeper relationship with existing customers

Compete more effectively in an increasingly crowded market

Achieve improved overall operational efficiency

Leverage technologies for digital transformation

Cloud

For faster time-to-market

5G/IoT

To provide industry specific offerings

Microservices

To support new business models

Analytics

For improved customer personalization

AI/ML

For more efficient operations

e-SIM

To allow out of the box connectivity

MVNOs are embracing digital transformation to be more flexible, customer centric & efficient in operations & cost structure.

Things to consider while going digital

Strategy to deliver on key customer needs first

Open API framework

Multi-tenant architecture

Microservices based architecture

Omnichannel experience
